

## Admission Control

State-of-the-art Technology for Cutting - edge Admission Control

Galaxy Admission Control provides timely ticket and pass usage information by combining sales data with access data from entrance and exit points. Turnstiles, mobile handheld devices, and point of sale stations combined with Galaxy Admission Control software support a variety of access needs at your facility. Admission Control accurately tracks their activities and reports results without skewing admissions numbers.

- **Admit Guests Through Mobile Admission Control**

Complement or replace traditional admission control products by providing ticket validation and other Galaxy Admission Control services on portable, Web-enabled devices.

- **Quickly Report Real - time Capacity of Your Venue**

Compare revenue collected for the sales of tickets versus the revenue earned from ticket use. View general admission, groups, and pass admissions in one report.

- **Clearly Indicate Ticket and Pass Validity**

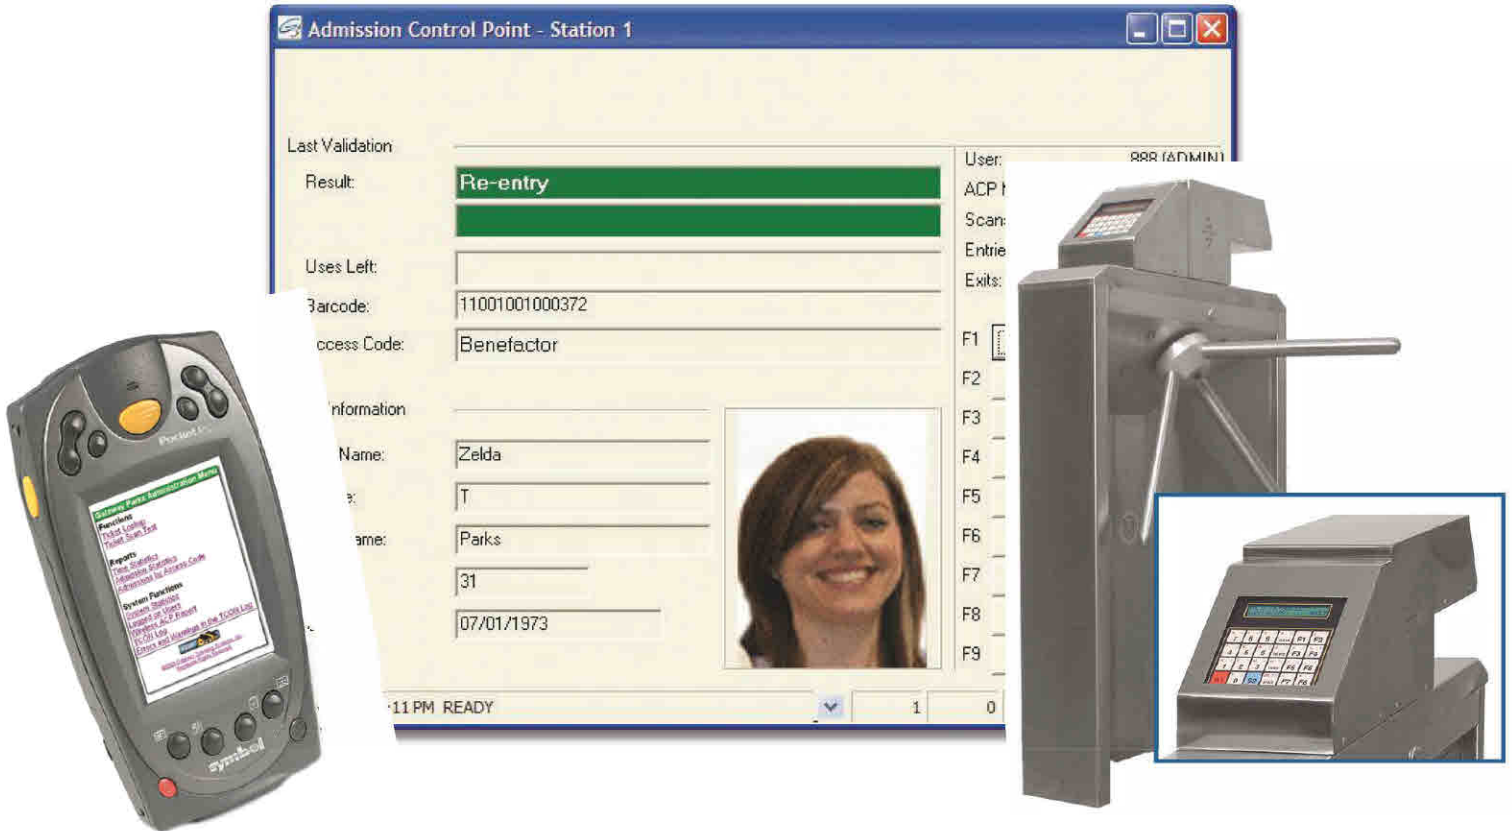

View valid and invalid messages, identify usage limitations and confirm pass holder identity with Galaxy Admission Control Station. Configure for touch screen display at point of sale stations or turnstiles.

- **Process Admissions Faster with SKIDATA Handshake**

Contact-free processing and compact turnstiles supported with SKIDATA Handshake technology. SKIDATA turnstiles validate multiple media types, including standard barcodes and contact-free data carriers.

- **Easily Integrate Admission Control Hardware**

Select from a Variety of pre-designed hardware solutions or create new prototypes based on your needs.

### Multimedia Validation Responses

- Active lights and sounds for valid and invalid tickets
- Modify the graphical output on Mobile Admission Control
- Reduce lines at turnstiles and gates

### Multi -park Support

- Configure stations to allow or deny admission to distinct locations at your site
- Accept third party tickets at all scanning stations
- Control internal and external locations with mobile admission control stations

### Integrated RFID Technology

- RFID technology can be configured to interact with other media such as lockers to secure guests' valuables
- Restrict entry or exit to certain access points
- RFID cards and wristbands can be reused
- Save on expensive waterproof ticket stock

### Cost Effective Design and Third Party Interfaces

- Uses standard PC architecture
- Compatible with all major turnstile manufacturers

### Durable, Waterproof and Reusable Components

- Data can be encoded and read from RFID chips embedded in a card, wristband or key fob.
- Durable, waterproof, and reusable

### Supports a Variety of Software and Peripherals

- Barcode, magnetic stripe, Radio Frequency Identification (RFID) and contact-free readers
- Weatherproof turnstiles
- Turnstiles, handicap gates, and parking gates
- Lights, locks, and displays

### Accurate Real -time Reporting and Management Tools

- Online in-park figures available through a Web interface
- Accurate validation state reporting, including entries, reentries, crossovers and exits
- Locked-out tickets automatically trigger supervisor notification
- Combine with Galaxy Order Entry to provide consignment and order breakage report
